Why

**HASTINGS ALUMI-AWNINGS
ARE THE BEST YOU CAN BUY**

HASTINGS **alumi-**AWNINGS

OFFER YOU MANY IMPORTANT ADVANTAGES

GRACE AND CHARM

As a lovely necklace or well chosen piece of costume jewelry adds beauty and attractiveness to a woman's gown, these artistically designed and colorful awnings provide a charming and distinctive appearance to a home or place of business.

UTILITY VALUE

Hastings Alumi-Awnings give you year around protection—you never take them down.

During the winter months they protect against snow, rain, sleet and ice—falling icicles will not damage them.

In the summer they cut off the bright rays of the sun and prevent fading of drapes, slipcovers, carpets and other decorative fabrics.

COMFORT

Your home or store will be twelve to fourteen degrees cooler when it is equipped with Hastings Alumi-Awnings.

Although sun glare is eliminated they do not shut out the light from the room or cast shadows. The full slatted and louvered sides provide adequate ventilation.

QUALITY MATERIALS

Hastings Alumi-Awnings are made of pure .040 aircraft aluminum. The roof or top of the awning is composed of slats, all of which are four inches wide but are produced in various lengths.

Each slat has a double and single flange with a scallop, valence and curl for the

purpose of giving the metal greater strength.

Formed in precision built rolling machines, the flanges are three-eighths of an inch in depth and interlock with each other for rigidity.

Each slat is put through a careful inspection before it is assembled.

The sides of the awnings are also formed of slats four inches wide and are strongly reinforced. Hastings Alumi-Awnings have been known to withstand gales as violent as 70 m.p.h.

The sides of the awnings are louvered to provide adequate ventilation.

SPECIAL PAINTING PROCESS

The secret of the enduring beauty of Hastings Alumi-Awnings is the special painting process developed by Metal Tile Products, Inc.

The rolls of aluminum to be used in the production of the awnings are put through a chemical bonderizing process which serves to form a permanent bond between the paint and the metal.

BAKED ON FOR PERMANENCE

The impregnated aluminum is put through a highly efficient baking process in specially constructed ovens, thus providing a finished, painted awning which

Only the finest, highest priced pigmented enamels are used together with special resins which compose an exclusive painting formula.

This assures a very durable and weather resistant enamel and gives the awnings a beautiful long lasting lustre.

is impervious to all weather conditions found in the world.

The baked enamel is put through a 1,000 hour "sun ray" test.

**HASTINGS ALUMI-AWNINGS WILL NEVER FADE, RUST,
CHIP, CRACK OR LOSE THEIR ORIGINAL BEAUTY**

CAREFULLY TESTED AND INSPECTED

The finest engineering and craftsmanship have been employed in producing Hastings Alumi-Awnings to assure a product of unquestioned quality.

A fully equipped testing laboratory, manned by experienced engineers and chemists, checks all materials and processes for quality, durability and fitness —no guesswork is allowed.

THE AERATED WATER BATH

This five hundred hour test (the equivalent of five years actual service) checks

the ability of the metal to resist corrosion and the quality of the paint film.

Oxygen or air is bubbled into 100° temperature water to promote rusting and breakdown of the baked enameled film. This is the most conclusive test known.

THE HUMIDITY CABINET TEST

Conditions under which this test is conducted are similar to a hot, high humidity day. The test verifies the resistance of the awnings to extreme summer weather conditions.

EASY TO CLEAN AND KEEP CLEAN

Hastings Alumi-Awnings can be easily washed with soap and water and rinsed off with a hose.

Waxing, with ordinary household wax, is recommended every three or four months in order to retain the original beauty and lustre of the awnings.

UNDERCOATING

Although Hastings Alumi-Awnings are made entirely of aluminum no brightness of the metal is exposed.

The underside of the awning is "roller coated" with a high grade white enamel. The complete understructure is also thoroughly coated.

This undercoating prevents darkness in the house by reflecting sufficient light. It also adds greatly to the overall beauty of the awning.

YOUR HASTINGS DEALER

All distributors and dealers of Hastings Alumi-Awnings were carefully screened and selected before the franchise was awarded. They have been factory trained in correct installation procedure and are

specialists in their field.

You are assured of a high degree of courtesy, service and satisfaction when you do business with the Hastings dealer.

Alumi-Awnings

Hastings Alumi - Awnings are accepted as the standard of the industry. They are permanent, adding an exquisite touch of beauty to your home the year around. These quality awnings will never sag, crack, peel or lose their original beauty. The highest quality aluminum is used in their fabrication and a special painting process assures everlasting lustre.

You'll be proud of your home when it is equipped with Hastings Alumi-Awnings.

Alumi-Tile

In your bathroom or kitchen where smooth, sanitary wall surfaces are of the utmost importance you'll find that Alumi-tile is ideal in every way.

Fabricated from highest quality aircraft aluminum it is finished in a beautiful, lustrous enamel, permanently bonded to the metal.

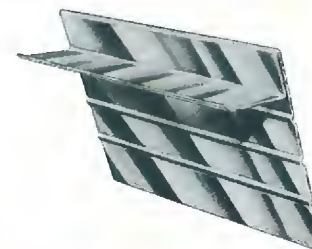

It is durable, waterproof, rustproof and will not crack or peel. Alumi-tile will last the life of your home. Available in sixteen beautiful shades and four distinctive marbled patterns.

Plastictile

Of the various tile products on the market today there is nothing to compare with Hastings Plastictile. It is the latest development in durable plastic tile for all household applications. Available in a wide range of attractive, decorative colors, it combines the advantages of tile with the virtues of a flexible, easy-to-apply plastic material. It is waterproof, stainproof and will retain its original beauty for many years.

Aluminum Mouldings

Hastings Aluminum Mouldings are produced of sturdy, long lasting, rustproof metal. Easy to apply, they make all joints weather tight as well as enhancing the appearance of any structure where they are used. Aluminium mouldings are available for asbestos siding, insulated brick siding, roof edge sections and all flashings.
